ATTRACTIVE WATER SOLUTIONS THAT WORK FOR YOUR HOME.

The Aquadra water system is designed with the user and environment in mind. The contemporary design is pleasing to the eye, while maximizing the water it can hold.

When using a Water Smart Management System like Aquadra you are not only helping the environment; you are putting green back in your pocket. With a **75 gallon** system you can fill up on an average home roof in 14 hours of rainfall.

Numerous possibilities open up when an Aquadra System is installed, from water your garden to washing your car (with pump).

When compared to other Green Initiatives like Solar and Low Flow Toilets, Aquadra's payback time is significantly less resulting in an easy investment for your home.
